

MRS Company Careers: SharePoint Developer

Job Description

Position: **Developer/Architect – SharePoint, Office 365, and .NET**

Career Path: **Team Lead – SharePoint, Office 365, and .NET**

Reports to: **Director, Operations**

About MRS

MRS Company is a software consulting and development company located near the airport in Toronto. Founded in 1979, MRS is a long-term player in the industry and has helped countless businesses in Canada and abroad to strengthen their operations through well-designed business systems.

At MRS, we believe that all businesses can improve with technology and software, and our team of skilled consultants and developers fulfill that belief with each client engagement.

Scope of Position

MRS is looking for a strong developer and technical architect to lead our SharePoint and Office 365 solution delivery team. This role will require architecture, development, consulting, and basic project coordination with other team members. We are also looking for someone who is able and willing to learn new technologies like those available in Microsoft Azure and help guide other team members on learning those new skills.

Responsibilities

- Work on our SharePoint team and coordinate projects with the other team members.
- Architect SharePoint and .NET solutions and formulate project plans.
- Consult on best practices for SharePoint; work with clients to recommend correct course of action, especially with SharePoint Online and Office 365.
- Extend SharePoint functionality through web parts, event receivers, custom components, features, and other components.
- Build and configure sites, libraries, content types, site columns, metadata, and/or other configuration as required.
- Configure/customize search.
- Create solutions for line of business data integration.
- Build custom forms and workflows.
- Investigate and evaluate new SharePoint and Office 365 technologies/methodologies.
- Participate in our agile development process.
- Understand user needs and requirement gathering.
- Gather and analyze requirements of assigned projects.

- Provide successful solutions to clients' business/technical problems.

Required Skills and Capabilities

- 5+ years of progressive experience in software development and solution delivery.
- SharePoint 2013, 2016, or 2019 development experience required.
- SharePoint Online and Office 365 solution delivery experience required.
- Experience with SharePoint Designer.
- Client-side development, web design/development, CSS, javascript, jQuery, and SPFx experience is a great asset.
- Experience with React and nodeJS is a great asset.
- Strong experience/familiarity with Visual Studio, ASP.NET, and various SQL Server editions required.
- Experience with Microsoft Flow, PowerApps, other Office 365 services is a great asset.
- Third-party workflow tools such as Nintex or K2 would be a great asset.
- Proven commitment and understanding of the software development lifecycle.
- Clear, effective communication abilities with ability to work in client-facing role.
- Comfortable in an Agile Scrum environment

Education and Experience Required

- University degree in computer science or information systems is a great asset.
- College diploma in a similar field or proven experience is also an asset.
- Proficiency in SharePoint, Office 365, C#, ASP.NET, and SQL Server is required.
