

Results realized: transform business processes with MRS

See how we're helping our partners modernize their businesses and drive efficiency with powerful process automation solutions.

Metrican partners with MRS to improve the customer experience

Broken communication between sales and engineering teams led to costly corrections to the engineering drawings. Our solution integrates Dynamics CRM with SharePoint upon closing the sale, creates a space for project-related documents, and automates the drawing approval process. **Less paper, less errors, better customer experience.**

Hain-Celestial optimizes product planning process

Planning out new products through spreadsheets and emails caused major headaches and delays. We used SharePoint and Nintex forms and workflows to automate the process. The result is valid, timely data, tasks and notifications, and an auditable process. **No more long email chains and confusions caused by duplicated documents.**

EastGen refines finance operations in Microsoft SharePoint

EastGen has to deal with thousands of invoices every month. Handling paper-based invoices required too much effort and intervention from the accounts payable team, and finding past invoices and their purchase orders was a pain. Our solution connects their scanners to SharePoint and incorporates the necessary document routing and approval processes along the way. **The result is a seamless approval process and a much easier way of referencing accounts payable documents.**

Kruger Products empowers frontline quality assurance workers

You know brands like Scotties and Cashmere for their superior quality. That's because their parent company, Kruger Products, obsesses over quality. We implemented a **cloud-based, mobile-responsive solution with Kruger to empower sales staff to input quality concerns directly from an iPad at the client site.** This ensures the quality assurance team has timely and accurate information about customer issues and concerns and lets them respond promptly.

Are you ready to transform your business?
